

Electrical | Pneumatic
Process | Manufacturing | Transportation

Kenyeri Engineering & Manufacturing designs, builds, programs, tests and starts up your control panel or turnkey system.

We incorporate the process equipment or instrumentation you sell as a turn-key, skid-mounted package. Kenyeri Engineering & Manufacturing can design and build the electrical control panel required to operate the system as well as the complete turnkey system if needed.

We assemble and test everything from 24V components for controlling valves to 32kVA Inverters for powering rail equipment. We use quality components at competitive pricing.
